

RFID Mifare Locker Lock

Contactless locks for lockers

A standalone battery operated lock.

Works with RFID Mifare cards. Without mechanical keys and therefore no key losses or duplications. Easy installation on existing lockers with metallic, phenolic or wood doors.

Suitable for right or left hand doors, and valid for doors thicknesses between 6 and 21 mm.

Features

- Made of 2 parts
 - External: reader
 - Internal: control unit and battery
- Battery: 3 Alkaline AA cells
- Lifespan: one year approx.
- Low battery warning
- Protection: IP 55
- Dimensions:
 - External part: 110x65 x16mm
 - Internal part: 135x65x23mm.
- Working temperature:
 - 20°C + 55°C
- Humidity: ≤ 90%

*In case the cells have run out, an external case with battery will power the lock.

Applications

Supermarkets, offices, hospitals, schools, universities, saunas, leisure facilities, etc.

Models according to function:

Single use mode

» The user cards are codified with software and a card writer.

» The lockers are open and anyone can use them. Any user may present the card and close the locker. To open the locker, the same user must present his card. The locker remains open ready for a new user.

Repeated use mode

» The first card which is presented becomes the programming card and can add or delete users.

» The user or the users (up to 30 users) make regular use of the same locker. The users registered may open the locker presenting the card. Once opened, the lock will get blocked within five seconds.
